## **SDI Set-Up Diagram**

### **SDI Set-Up Instructions**

#### Step 1:

Bolt Valve Assembly, Part #18-300, onto cross member of boom using 3/8 x 1" bolts, lock washers and nuts (supplied).

*Note:* If boom has adjustable channel cross angle, use 3/8" adjustable channel nuts (supplied).

#### Step 2:

Install D.I.N. connectors from wiring loom using water resistant D.I.N. connector gasket and screws included in the 18-200 kit, to Motorized Valves and Pressure Regulator.

Note: If harness is supplied on the Service Vehicle, D.I.N. connector with 2-prong plug, Part # 18-321, is included in the 18-320 kit.

#### **Step 3:**

Plug 5/32" tubing into tubing adapter located next to valve #1.

#### Step 4:

Install ball valve and 3/4" hose barb adapter elbow (included in 18-300 kit), to pump outlet. Run 3/4" hose (cut to desired length), from pump to inlet on the Motorized Valve.

#### Step 5:

Remove 1" plug from return fitting on tank. Install 1" hose barb elbow to return fitting.

#### Step 6:

Install bypass return hose from 1" hose barb elbow on Motorized Valves to 1" elbow on tank.

#### **Step 7:**

Cut 3/4" hose to length and install from valves to boom inlet adapters (allow extra length on outer wing sections to allow for breakaway capabilities).

#### **Step 8:**

Install Control Box to Control Mount.

Using All Function Control Box, plug into socket located near glove box.

#### Step 9:

Install 5/32" tubing into adapter on Control Box.

### **Setting Pressure for Motorized Controls**

The following instructions are designed to assist you with the proper setting and testing of your Motorized Control Unit.

#### For models with a diaphragm pump:

- 1. Shut off ball valve to boom.
- 2. Set manual relief valve to 70-80 PSI (this is used mainly as a safety valve and will not operate below that pressure).
- 3. Open ball valve to booms.

#### For all models (for centrifugal pump models, the first three steps are not required):

- 4. Close all three (3) **Metered Bypass Valves** (red knobs), by turning knobs in a <u>clockwise</u> direction as far as they will go (Figure 1).
- 5. Open <u>all three</u> (3) sections of the boom from the **Control Panel**. Set desired operating pressure using electric **Control Switch** on the **Control Panel**. To set the **Metered Bypass Valve**, close <u>one (1)</u> boom section at a time. Then open the **Metered Bypass Valve** for that boom section until the desired operating pressure is achieved.

**Example:** Desired pressure is 40 PSI - to set **Metered Bypass Valve:** 

- A. Shut <u>left</u> boom section off on the Control Panel.
- B. Pressure will read more than 40 PSI.
- C. Using <u>left</u> Metered Bypass Valve, open valve until operating pressure returns to 40 PSI.
- 6. **Repeat** the above procedure for the **center and right boom sections,** making sure the other two (2) boom sections are open.

#### **Motorized Control Valves:**
