

# Turf Walker SC10

## *Self-Contained Walking Spray Boom*

The **Turf Walker SC10** from SDI features a 10 gallon spray tank, 12 volt pump with rechargeable battery and a folding 10 foot (3 meters) wide spray boom with 12 drip free nozzles on 10 inch centers. Each boom section can be individually controlled.

The quiet, battery powered pump develops a maximum pressure of 60 PSI (4.1 Bar) and an open flow volume of 5.5 GPM (20.8 LPM). This range of pressure and volume gives you a consistent and easily controlled application. It also allows you to use a wide range of spray tips including air induced spray tips which typically require minimum pressures of 30 PSI (2.07 BAR) to properly function. The pump is CE compliant. The sealed 12 volt battery has an easy to use quick connection to easily convert from charging to applying. But the best part is...**NO** Noise from the application!

Depending on your actual spray rate, the 10 gallon (38 liter) capacity spray tank can apply materials to several thousand square feet. The tank on the **Turf Walker SC10** is constructed from lightweight poly-

ethylene and has been calibrated for gallons and liters. There is a 3 way valve at the bottom of the tank to allow complete draining of the tank.

The **Turf Walker SC10** 10 foot boom folds down to just 41 inches wide for transport or easy movement through a gate. Empty weight is only 95 pounds and less than 190 pounds fully loaded!

The spray boom is easily adjustable for height and spray angle. Just shorten the chains to increase the height and rotate the boom to change the angle. The drip free nozzle bodies have quick connect caps to easily change the spray tips. The included spray tips are TP8003VP.

The folding spray boom is constructed from stainless steel tubing and has 12 nozzles with diaphragm check valves. Each boom section can be controlled separately.

The operator benefits from an easy to read liquid filled pressure gauge, programmable speedometer and push button activation. Use the attached weed wand to spot spray areas you can't reach with the boom. But, perhaps the biggest benefit of all is not having to drag spray hose when making an application.

In the winter, the **Turf Walker SC10** can be used to apply liquid deicing materials to patios, sidewalks and other pedestrian areas needing seasonal protection from slips and falls.
